

PENETRATING LUBRICANT WITH PTFE

Penray Penetrating Lubricant With PTFE is a high tack, clear, lubricating gel which provides lubrication at temperatures from -30°F to +500°F. Penetrates as an oil to lubrication point, then forms into a tacky grease-like gel. Deposits a fine polytetrafluoroethylene and gel lubricant mixture deep inside working parts. Resists water washout and weathering. Prevents rust and corrosion while covering surfaces with a moisture proof barrier film. Safe on most plastics.

USE ON: Gears, sprockets, hinges, chains, cable, wire rope, slides, valves, pistons, rings, seals, bearings, sleeves, cams and bushings. USED BY: Machine shops, light and heavy manufacturing, HVAC, plumbing and other trades. Automotive and virtually all maintenance or repair operations.

- Protects Original Finishes
- High Tack
- Safe on Most Plastic
- Effective from -30°F to +500°F
